2,400 Years of Malacology

Eugene V. Coan¹ &
Alan R. Kabat²

ABSTRACT

This compilation provides a comprehensive catalog of biographical and bibliographical publications for over 33,000 malacologists, conchologists, paleontologists and others with an interest in molluscs, from Aristotle to the present. For each person, the birth/death years and nationality are given (when known), sometimes followed by information on relationships and specializations, then by bibliographic citations to the literature about that person and his/her collections and publications, and finally links to some important papers and books by older workers. Appendices provide citations to (1) publications on oceanographic expeditions and other natural history expeditions that resulted in the collection and description of molluscs; (2) histories of malacological institutions and organizations; (3) histories and compendia of dates of publication of malacological journals and of journals frequently cited in malacological publications, such as those of the Zoological Society of London; and (4) a decoding of name abbreviations found in early literature. Three Annexes provide collations for many molluscan serial works and journals.

TABLE OF CONTENTS

Introduction	3
Materials and Methods	4
Narrative Guide to the Literature	9
General Publications	10
Geographical / Country Publications	15
Taxonomical Publications	26
Concluding Remarks	27
Future Plans	30
Acknowledgments	30
General References	31
Serials Indexed	51
General Bibliography	53
Anonymous & Institutional Works	54
Individuals	55
Appendix A: Publications on Expeditions	1,970
Appendix B: General Histories of Museums, Malacological Institutions, and Societies	1,993
Appendix C: Information about Malacological and Some Other Serials	2,025
Appendix D: Name Abbreviations in Older Malacological Literature	2,033

INTRODUCTION

Who was X? How can I find out more about X’s life, interests in molluscs, collections, and publications? Every generation of malacologists has been faced with this perennial problem, whether out of curiosity, or driven by a need to solve a problem relating to some aspect of molluscan taxonomy, systematics, or a wide range of other research and collection management issues. Malacology does have an abundant historical literature. Yet, this literature exceeds the ability of any one person to remember or even be aware of the universe of relevant publications.

We have prepared this catalogue to bring some order to this literature, and to simplify the task of future generations. Indeed, both of us has been asked, on more occasions than we can remember, for this kind of information about individuals or publications. We trust that our efforts in preparing this catalog will save others much time and effort in researching issues related to the history of malacology and conchology. Nearly six decades ago, S. S. Berry (1965), in a paper aptly titled “Good molluscan bibliographies – few and far between,” called upon malacologists to prepare various subject-matter bibliographies, including one that would compile various bibliographic publications, thus anticipating this catalogue.

Edition	Date	Pages	Annex(es)
1	June 16, 2004	612 pages	
2	January 23, 2005	598 pages*	
3	January 18, 2006	663 pages	
4	January 25, 2007	719 pages	14 pages
5	December 7, 2007	775 pages	24 pages
6	February 15, 2009	830 pages	32 pages
7	January 15, 2010	874 pages	34 pages
8	February 15, 2011	936 pages	42 pages
9	March 15, 2012	1,024 pages	76 + 65 pages
10	February 7, 2013	1,088 pages	89 + 65 pages
11	January 14, 2014	1,128 pages	94 + 65 pages
12	January 22, 2015	1,166 pages	104 + 65 pages
13	January 8, 2016	1,254 pages	104 + 65 + 32 pages
14	January 27, 2017	1,443 pages	109 + 65 + 48 pages
15	February 12, 2018	1,594 pages	109 + 65 + 48 pages
16	February 1, 2019	1,710 pages	111 + 65 + 62 pages
17	January 30, 2020	1,781 pages	112 + 65 + 63 pages
18	February 3, 2021	1,875 pages	125 + 65 + 63 pages
19	January 15, 2022	1,967 pages	125 + 65 + 64 pages
20	January 25, 2023	2,006 pages	140 + 67 + 68 pages
21	February 1, 2024	2,037 pages	148 + 67 + 72 pages

* The decrease in page numbering from the first (2004) to the second (2005) edition was the result of formatting changes; the second edition actually had about 15% more entries than the first.

Through the tenth edition, Richard E. Petit was a coauthor, contributing greatly in the initial review of journals and other publications and through his many contacts with

malacologists throughout the world. He passed away on the last day of 2013, his participation greatly missed.

MATERIALS AND METHODS

In preparing this catalog, we have drawn upon our own research files, as well as the reprint, serial, and monograph collections of several libraries. Many publications were unearthed through the methodical review of the contents of each volume of a large number of malacological serials, along with several other general serials that have numerous general biographical articles and are enumerated at the end of this Introduction. We have also reviewed the abstracts and proceedings volumes of the meetings of the American Malacological Society (formerly the American Malacological Union), *Unitas Malacologica*, the Western Society of Malacologists, and several other organizations. More information about these meetings and their publications was provided by Coan & Kabat (1996) – now also periodically updated at: <https://ams.wildapricot.org/More-Publications>

One of us (AK) worked through the volumes of the *Zoological Record* from 1901 (when that publication first started separately indexing biographical publications in its subject-matter index) through 144 (for 2008). The *Zoological Record* proved useful in identifying publications from non-malacological serials, notwithstanding the erratic nature of its coverage. One of us (EC) reviewed the entries in the WorldCat under about 80 molluscan groups. In addition to many publications and persons, this review also revealed many university theses; while these unpublished modern theses are unavailable for taxonomic purposes, they often reflect important contributions to biology and paleontology. These are searchable herein under selected topics, such as “littorinid” or “mytilid”. On the other hand, many pre-1940 theses, particularly those from Germany, were printed and distributed and are considered available for nomenclatural purposes.

Inevitably, this catalog emphasizes publications in malacological journals and newsletters, and books primarily or exclusively about molluscs. We have attempted to cite, when available to us, publications in the non-malacological literature, although we have made no attempt to cite every publication written about those with extensive interests outside the field of malacology, such as Cuvier, Lamarck and Rafinesque, and particularly those who are the subject of innumerable publications that would be futile for us to attempt to catalog, such as Agassiz, Darwin and Linnaeus, as well as explorers with an incidental interest in molluscs. We have made occasional reference to newspaper obituaries, chiefly for those published in the *Boston Globe*, *Los Angeles Times*, *New York Times*, *Washington Post*, and *The Times* (London), as well as articles from the newspapers and alumni magazines of several universities. However, identifying and obtaining the non-malacological literature is very time-consuming, thereby proving the old adage that for any major project, “five percent of the entries will require fifty percent of one’s time.”

We have followed the Council of Science Editors (CSE) *Scientific Style and Format* (7th ed., 2006: 107), with respect to the citation of author’s names, now the standard for scientific publications. This has resulted in some usages that may be different from what some readers have been used to. French names beginning with d’ or de are indexed under the first capital letter. The exceptions are d’Arciac and d’Orbigny, who are under “d.” rather than “A” or “O”, following a long-standing convention in French malacology. The CSE’s

recommendation for both German and Dutch names is now that certain prefixes are indexed [am, de, del, della, delle, des, di, du l', la, les, li, los, ver, zom, zum, and zur] and others not [den, op de, ten, ter, van, van den, van der, von, and von der] – “Van” and “Von” were often added to a name when the person received a nobiliary title, such as “Count”. Thus, von Martens is under “M” and van Bruggen under “B.” For convenience, we have included cross-references where appropriate, since the results may differ from what those authors or their editors did in their time. In Belgium, however, “Van” and “De” are considered to be part of the name; thus: “Van de Poel, Luc”. On the other hand, when a person of European descent moves to, or lives in, the United States, such names are treated differently, e.g., van der Schalie is listed under “v”.

Italian names that begin with de, della, or di are generally listed under those prefixes; thus, de Gregorio is under D (an exception is Monterosato, who had a nobiliary title, and is listed under M).

Spanish and some Belgium (i.e., Flemish) names are under the first of two last names, if two are present, whereas with Portuguese names the second element is the one alphabetized (an exception being women with hyphenated married names). For clarity, Spanish-speaking authors now often use a hyphen between their two last names, partly to avoid being wrongly alphabetized. However, in publications they may or may not have listed their second last name, which would change their alphabetic position.

Moreover, some journals print names in all-caps, often omitting accents in doing so. When an author had a nobiliary title as part of his name, such as Baron or Count (or their French, German, and Italian equivalents), we have generally indicated that title in brackets following the name. Often cited specialized professions are also given in brackets, such as “Reverend” or “M.D.”

Hungarian, Chinese, Korean, Cambodian and Vietnamese names in their original languages are written with the last (family) name first, and the article titles about them will thus often have the names in this original sequence; for these names, we have generally placed the comma between the last and first names in brackets to indicate that it would not normally be present. It should also be noted that Chinese names can appear in the literature under more than one transliteration and that in recent years there has been a transition from separately written given names, through hyphenated ones, to given names written as a single word.

Names in Russian and other languages that use the Cyrillic alphabet can be problematic with multiple transliterations of names in the older literature, usually differing in the ending.

Here alphabetization also follows *Scientific Style and Format* (7th ed., 2006: 601-503) and is like most library catalogues in ignoring accents and diacritical marks. It should also be noted that many French persons are listed in the older literature variably with hyphens linking their given names; we have simply listed the names as given in the various papers and made no judgment as to whether hyphens should, or should not, be used. Mac... and Mc ... are separately indexed, although they are often integrated in Literature Cited sections these days.

We have listed the given names of each person, to the extent such information is available. Otherwise, we have only listed initials (e.g., “Doe, J. A.”), or left an underlined blank if even the initials are unknown (Doe, _____). In the 1800s and earlier, it was common

for individuals to have more than two given names, and sometimes as many as four or five. We have indicated all such names known to us. However, if there were many and it is not readily apparent from the listed references which name(s) were normally used by the person in publications, an indication in the bulleted (●) notes at the top may clarify this.

We have not tried to indicate all the variant spellings or misspellings of given names. However, particularly when authors used different spellings in their works or if these are common in subsequent citations, these spellings may be indicated. Sometimes authors moved from one country to another and changed their names to accommodate. It should be noted that sometimes journal editors and book publishers “translated” given names, so that Carl might become Karl, and vice versa.

Some pre-1800 authors have been cited in the literature under either their native name, or the Latinized version of their name. Well-known examples include Linnaeus / von Linné and other examples include those that are alphabetized differently, such as Gilles d'Albi / Albiensis. For consistency, we have usually listed all such pre-Linnaean authors under their native name, with a cross reference under the Latinized version. For Linnaeus himself, and the post-Linnaean authors, we have generally used the version recognized by the *International Code of Zoological Nomenclature* (i.e., Linnaeus, not von Linné), or that has been more widely used in the literature (e.g., Rumphius, not Rumpf).

For each person, we have indicated the countries, colony, or territory of residence, where they were born and where they lived for a substantial part of their careers. We have not indicated countries where a person stayed for relatively short periods, such as going to school, short-term academic assignments, or extensive collecting expeditions. We have a number of entries for Czechoslovakia, and if anyone was active in that country from 1918 to 1993, then they are usually listed under this older name. Only those active after 1993 would be listed under either Czech Republic or Slovakia, but we were not able to determine the current country for every such person. The same is true of the old Soviet Union and its constituent countries. Also, this is not a determination of the person's nationality or citizenship. Bulleted (●) notes following the person's name may highlight some situations.

When known to us, we have also indicated in the bulleted (●) notes following the person's name genealogical relationships among individuals who were related by family or marriage. Well-known examples include the Sowerby family of the United Kingdom, and the Fischer and Piette families of France. While these relatives may have collaborated, their research usually did not completely overlap. An unusual exception is the father-son team of Moritz and Richard von Kimakowicz-Winnicki, who lived in Hermannstadt (now Sibiu, Romania), and who devoted almost all of their research to the study of a single subgenus, *Clausilia* (*Alopi*).

We have *not* attempted to duplicate two prior publications that covered several related aspects of the history of this field. (1) Kabat & Boss (1992, 1997) provided a comprehensive compilation of publications on molluscan type catalogs, which indexed these type catalogs by author, museum, and taxon. In the present catalog, we have generally included the type catalogs that involved one or a few authors (and typically included some biographical information about those authors), but we have not included the type catalogs that lacked biographical data, or that were general catalogs of the type collection of a given museum. (2) Bieler & Kabat (1991, periodically updated: <http://emuweb.fieldmuseum.org/iz/journals.php> (website inactive as of January 2021; expected to be restored, perhaps with a new link,

sometime in the future) provided a comprehensive compilation of molluscan journals and newsletters, including their numerous supplements, along with secondary literature on these serials – such as articles about the history of a journal, or articles that established the publication dates of a journal. In this catalog, we have included the literature on the histories and publication dates, set forth in Appendix C.

We have referenced, whenever possible, the Opinions, Decisions and Directions of the International Commission on Zoological Nomenclature regarding the nomenclatural availability of malacological publications authored by the persons listed here. This information was obtained chiefly from the published indices (Melville & Smith, 1987; J. D. D. Smith, 2001), now also available at: <http://www.iczn.org>

We have included, where known to us, Internet publications and websites devoted to the biography or publications of now-deceased persons. In addition to works on specific persons or publications, an increasing number of scanned versions of a number of natural history publications, including those on molluscs, are now available online. We have here included links to many such publications, but their number is now increasing so rapidly that it would be impossible for this list to keep up and to provide a link to each. The key place to find what is currently available is through www.archive.org and a general Internet search may reveal others.

The general websites that we have identified include:

- (1) <http://www.biodiversitylibrary.org/> has high-quality searchable scans of numerous books and journals in natural history, which can be downloaded by article or volumes. It is probably the most useful online reference compilation for systematics.
- (2) <http://www.archive.org/details/texts> a large digitization compilation, although poorly indexed, particularly with regard to serial publications.
- (3) <http://books.google.com/> is a digitization project that has picked up various molluscan books. Many of the initial scans had very poor quality control.
- (4) <http://gallica.bnf.fr> (Bibliothèque Nationale de France), with reproduced copies of important early malacological and other natural history publications;
- (5) <http://animalbase.org/> (University of Goettingen, Germany) is an index to online taxonomic publications in various libraries, including a number available at that university itself.

Note that as of 2023 within our list, we do not include active links to the first two of these. The number of such links became so large that the Word files that are the basis of our list would not function correctly.

Six additional online resources are also invaluable in tracking down literature:

- (1) Neave's *Nomenclator Zoologicus*, an index to genus-level names in zoology from 1758 through the present, has the first nine print volumes (through 1994) available online, in searchable format, at: <https://www.checklistbank.org/dataset/126539/about> A tenth volume (1995-2004), available only online, was then incorporated into the database.

(2) Sherborn's *Index Animalium*, an index to species-level names in zoology, from 1758 to 1850, is available online, in searchable format, at:

<http://www.sil.si.edu/digitalcollections/indexanimalium/>

(3) The decisions of the International Commission on Zoological Nomenclature, including those about accepted and rejected works, are indexed at: <http://www.iczn.org>

(4) B. B. Woodward's *Catalogue of the books, manuscripts, maps and drawings in the British Museum (Natural History)* (1903-1915) is available online at:

<http://www.archive.org/details/texts>

(5) F. Ruhoff's *Index to the species of Mollusca introduced from 1850 to 1870* (1980) is available online at: <http://dx.doi.org/10.5479/si.00810282.294> or

<https://repository.si.edu/handle/10088/5331> Although it is indexed by species name, it can be searched by author or genus, and there is also a generic index at the end.

(6) R. Gaedicke & E. K. Groll, entomologists with the Senckenberg Deutsche Entomologische Institut, have compiled numerous biographies and bibliographies of entomologists, including a number who also worked on mollusks; this information is updated and available through the Senckenberg Museum, at:

<http://sdei.senckenberg.de/biographies/>

We have not indexed the home pages of living persons, as those Internet addresses (URLs) tend to change from time to time, and it would be time-consuming for us to verify all such addresses each time this compilation is updated. Thus, we recommend that malacological societies include this information in their membership directories, where it can be more readily updated at the time of membership renewals.

Finally, this work emphasizes those whose interest in malacology was in organismal and evolutionary biology and paleontology, as opposed to biochemistry, molecular biology, neurobiology, physiology and fisheries. However, it includes some in these categories, particularly those who published in malacological journals.

In recent years, we have added many entries (as placeholders) for living malacologists who have published articles in malacological journals, even though there may not yet be any published biographical material about them. These entries should help in identifying researchers who have the same or similar names.

We have reviewed the online library catalogues for Recent Mollusca of the Smithsonian Institution and the Library of Congress. This unearthed a good many authors not previously covered. In doing so, we omitted the many, very repetitive books for children on snails, slugs, squids and *Octopus*. We have not attempted to modernize the names of taxa covered in physiological or ecological studies.

Appendix D, added in the 2017 edition, covers author name abbreviations that often appeared in early literature.

In Annex 1 to this list, we present collations of many works of significance for malacologists. Our goal is to eventually to include in one place most of those of malacological significance. Each of the collations included is referenced under the appropriate author(s) in the main list.

Annex 2 is devoted to the complex collation of the Küster edition of Martini & Chemnitz, published from 1837 to 1920.

Annex 3 is devoted to collations of malacological serials and journals.

There are several limitations to the data. First, many obituaries and other biographical publications do not provide information on the birth year of the subject. Sometimes, an obituary will specify that the subject died at a certain age, which, if the death year is given, allows the calculation of the birth year, at least to within two years. Some obituaries even fail to specify the year the person died, and because an obituary may be published one to several years after a death, one cannot assume that the subject died in the same year as the obituary. This kind of information was probably more readily available at the time that the obituary was written, but becomes increasingly inaccessible in the ensuing decades. In such circumstances, we have sometimes succeeded in obtaining this data from library catalogs or from other sources, such as Christiaens (1994). It should be noted that for persons who lived before the 19th century their life dates may have been recorded in the Julian (old style) calendar in some sources and in the Gregorian (new style) calendar in other sources, which may account for some discrepancies. This problem extends to the early 1900s for some countries, such as Russia, which belatedly converted their calendars. Second, while there are some malacologists whose lives have been amply documented, there are many others for whom only limited information is available. Hence, a consequence of this catalog is to highlight those persons whose lives and publications would profit by better documentation, as well as some who are, if anything, over-documented, such as William Swainson. For example, the Pfeiffers of Germany need clarification as to who wrote which papers.

Note that conversion of our original Word file into pdf format may result in some of the longer links – those that are two or more lines long – becoming inoperable. For these, a user should cut-and-paste each line into their Internet browser, eliminating any spaces. We apologize for this unforeseen and seemingly unsolvable difficulty.

NARRATIVE GUIDE TO THE LITERATURE

Most publications are about one or several persons, and have been cited in full under the entry for the relevant person(s). In contrast, there are more than 200 publications or series that provide biographical or bibliographical information concerning a large number of persons or publications. For these publications, we have simply given a short citation under the individual entry (e.g., “Smith, 1980: 234”), the full reference(s) being given in the General Bibliography at the end of this Introduction.

For the convenience of the reader, we set forth a brief narrative description of the key secondary literature in this field, arranged in three sections: (1) general publications; (2) publications on persons who lived or worked in a geographical region or country; and (3) publications on persons who worked on a specific group of molluscs. We recommend that malacological research libraries obtain copies of these general publications.

We note, without singling out any individual publication, that they sometimes have errors, some assuredly typographical, others more puzzling. We usually have provided what we believe to be the correct information in our listing, with some bracketed notes to focus on some obvious errors in dating and spelling by particular sources.

One interesting discrepancy we have run across in obituaries merits a note. The correct term to use if desired is “in memoriam” [feminine singular accusative, corresponding to the Latin feminine word “memoria”]. Thus, “in memorium” is grammatically incorrect. We even found one publication in which someone invented the strange term “in memorandum” for an obituary!

(1) General Publications

In addition to the individual works cited below, we have made good use of the following multi-volume biographical dictionaries: *American national biography* (24 volumes, 1999, and supplement, 2002); *Australian dictionary of biography* (16 volumes, 1966-2002); *Dictionary of American biography* (11 volumes, 1928-1958); *Dictionary of national biography* (22 volumes, 1885-1901 and supplements through 1990); *Dictionary of New Zealand biography* (5 vols., 1990-2000; online version with portraits; printed edition without); *Dictionary of scientific biography* (18 volumes, 1970-1980, and supplements through 1990); *Nieuw Nederlandsch biografisch woordenboek* (1911-1937); and *Oxford dictionary of national biography* (60 volumes, 2004). For the latter, it should be noted that some articles are revisions of articles published in the earlier edition and its decennial supplements. We have not included general biographical references that appear in multiple editions, such as *Who's who* and *American men and women in science*. Those works have been published in so many editions that it is not feasible to index each one. However, we alert the reader to their existence.

Adler (1989, 2007, 2012), in his biographical histories of herpetologists over the past two millennia, included a number of herpetologists who also studied and collected molluscs, as well as several malacologists who published a few papers on amphibians and reptiles.

Argenville (1742, 1757), the earliest works cited herein, included informative discussions of early shell collectors, principally from the seventeenth and eighteenth centuries, including many whose collections are otherwise documented inadequately or not at all elsewhere. He also included biographical comments about many of the collectors, especially those who had titles or were associated with royalty and learned societies.

Barattini (1964) gave a short history of early malacology based on a talk given in 1960.

Barnett (2021), in her cultural and environmental history of the relationship between humans and molluscs, discussed a number of malacologists, shell collectors, and others whose lives intersected with molluscs.

Bass et al. (2021) published a lavishly illustrated and well-researched art history analysis of the use of shells in art, including in paintings, engravings, and shell art. One of the co-authors of this book published an earlier version on the connections between shell collecting and still-life paintings (Leonhard, 2007).

Bonnet (1945), in a biographical catalog of arachnologists, included several who studied both spiders and molluscs.

Boss (1988, 1999) and Heller (2007) indexed the works cited by Linnaeus in his 1758 and 1767 editions of *Systema Naturae*.

Breure (2019) listed the many correspondents and collaborators of J. L. Staid-Stadt (pp. 65-76).

Brightwell (1872) is a Victorian-style account of various mostly well-known naturalists, primarily worth noting for its account of Michel Adanson's travels in Africa.

Caprotti (1991) published an annotated bibliography of illustrated malacological works from 1475 to 1800. Caprotti (1998) published a bibliography of works from 1800 to 1868 containing illustrations of molluscs.

Christiaens (1994) is a curious publication, comprising one line per subject, and giving little more than the full name, birth and death dates, and a few words describing that person's contributions to malacology. Although we have not cited its "entries," we found this work useful in providing the names and life dates of individuals for whom we have not yet identified any other published source. Hence, this work is the source for some of the "orphan" entries in our catalog, that is, those without any citations. A downside of this publication is that it also includes many non-malacologists, evidently in an attempt to provide some historical context to the malacologists, but it is sometimes difficult to determine which persons are actually non-malacologists. Christiaens (1977a, b) also published a preliminary catalog of oceanographic expeditions that led to the collection of molluscs, together with a listing of some malacological publications resulting from those expeditions.

Cleevely (1983) is an invaluable reference work in paleontology, with information on the collections and secondary literature on numerous paleontologists, with an emphasis on those from the United Kingdom and Ireland. If a reader does not find a certain paleontologist in our catalog, or requires more information, then Cleevely (1983) would be an excellent source to check.

Coomans (1989) discussed a number of mostly European collectors who were active in the West Indies in the 19th century, and who corresponded with the Dutch collector Hendrik van Rijgersma.

Corliss (1978), in a "pictorial" history of protozoology, included a number of protozoologists who also studied molluscs.

Cowie & Thiengo (2003), as part of a systematic monograph on the Ampullariidae, provided the first detailed collations of several older publications arising from expeditions and other sources.

The first volume of Cuvier's *Histoire naturelle des poissons* (1828) was a comprehensive biographical survey of ichthyology from Aristotle to the 1820s, and included numerous individuals who also studied or collected molluscs. This publication was recently translated with additional biographical data included (Cuvier & Pietsch, 1995).

Excerpts from a manuscript by E. M. da Costa listing and in some instances commenting on collectors of natural history and other materials were published posthumously in two parts in an English literary magazine (da Costa, 1812).

Damkaer (2002), in a sumptuously illustrated history of early workers on copepods (Crustacea) from Aristotle to 1829 included over 50 researchers who also studied or collected molluscs. A second volume (2017) covered 1830 to 1890, and the final volume (expected to be published in 2022) will cover 1890 to 1950. An earlier article, Damkaer (2001), covered several American workers.

Dance (1967), in discussing the Linnean collection, included a list of persons who provided Linnaeus molluscan specimens or information. Dance (1985) provided a short historical survey of conchological cabinets as part of a museum exhibit in Geneva. Dance (1986) wrote the key reference on the history of shell collecting. This, the second edition (the very similar first edition of 1966 is thus not indexed herein), provides copious detail on several centuries of conchology and malacology, with an emphasis on Europeans. Its Appendix listing the locations of historical shell collections is now online, with some updates, at <https://gbmolluscatypes.ac.uk/tracing-collections>

Dance's (1970) study of Bourguignat's "Nouvelle École" included biographical material about a number of European malacologists. He treated some workers again, but added a few new names in a survey of molluscan literature (Dance, 1999). In a discursive collection of anecdotes about shell collecting, Dance (2005) included a number of biographical fragments about various collectors over the past several centuries. Dance (2009) discussed the authors and sources of a number of humorous or unusual molluscan names.

Davidson (2008), an art historian, discussed numerous paleontologists who were known for their illustrations of fossils.

Dean (1936), in some respects, a precursor to Dance (1966, 1986), surveyed 19th century "conchological cabinets," with an emphasis on British shell collectors.

De Ceglie (2009), in covering the correspondents of Scacchi, touched on other paleontologists of the late 1800s.

Dickinson et al. (2011) compiled numerous collations for systematic publications on birds; their catalogue includes a number of general works that also covered molluscs.

Dijkstra (2010), in collating the three additions of Knorr's "Vernügen", discussed the collectors upon whom Knorr relied.

Edwards (1967) provided biographical information on a number of paleontologists, mostly before 1800.

Endersby & Fliedner (2015), in their study of those who published on Australian dragonflies, included a number of zoologists who also studied molluscs.

Evermann (1917), in his history of zoology in Indiana, included a number of individuals who collected or published on the non-marine molluscs of that state.

Forli & Guerrini (2022) discussed numerous early (pre-1800) paleontologists, primarily Italian, and their contributions to the field.

Frank (2019) in her comprehensive survey of how humans have used molluscs, included short biographies of a number of malacologists and others who published on molluscs.

Franchini et al. (1975) discussed numerous individuals who studied or collected shells prior to 1800, with an emphasis on the pre-Linnean period.

Gayet & Babin (2007) provided short biographies, most with photographs, of numerous deceased paleontologists.

Geiger et al., eds. (2019) provided short biographies and portraits of 23 authors in the James H. McLean memorial volume.

Goodwin (2021a, c) gave an account of women in early malacology, and a discussion of

obituaries in the Journal of Conchology (Goodwin, 2022a, b).

Gosliner et al. (2008) and Groeben (2008) discussed the numerous marine biologists, including malacologists, who studied the marine fauna of the Mediterranean (we've not included the numerous graduate students listed in the first paper).

Heppell (1995) provided a concise history of malacology from its pre-historical origins as evidenced by archaeology through the Greek and Roman periods to the early 1800s.

Hylleberg (2009a, b) discussed the history of the collections at the Zoological Museum of the University of Copenhagen, with an emphasis on the bivalve family Cardiidae, with details about collectors, donors, and curators, mostly Danes but with a number of others, including portraits.

Knudsen (1970), in his monograph of deep-sea bivalves, provides a useful compilation of oceanographic expeditions.

Kusukawa (2011) discussed the role of early images in the development of natural history.

Lambrecht et al. (1938) is an extensive catalogue of biographies and bibliographies of paleontologists, and in some respects is a precursor to Cleavelly (1983).

La Rocque et al. (1951, 1963), in indices to the *Conchologists' Exchange* and to *The Nautilus*, made the effort to find the full names and life dates for those journals' authors.

Mathews (1920), although focused on ornithological literature, provided dates for some works of molluscan significance.

Maton & Rackett (1804) is a remarkable work in its compilation of conchologists from Aristotle to the close of the 18th century. This work, which merits wider notice, provides information on numerous pre-Linnaean authors. However, it is somewhat frustrating to use, since it does not always provide the author's full names or birth/death dates, making it difficult to determine which of several persons with the same last name is the subject of their entry. They also included those who worked on barnacles and the mythological "barnacle geese," and we did not index such persons unless they also worked on molluscs.

Mearns & Mearns (1988) discussed the lives of numerous individuals who had bird species named after them; many of these persons also studied or collected molluscs.

Melvill (1897), in an essay about nomenclature, discussed many pre-Linnaean authors.

Nissen (1969) catalogued numerous illustrated zoological books, including identifying the artist(s) who did the illustrations for each book.

Olsson (1961: 9-16) discussed collectors and workers on the marine tropical eastern Pacific fauna.

Osborn (1952), in his biographical history of entomology, included a number of entomologists who also studied or collected molluscs.

Papavero (1971-1973), in his biographical history of those who studied or collected the Diptera (flies) of Latin America, accompanied with day-by-day descriptions of their travels, included numerous individuals who also studied or collected molluscs.

Porro (1841), an extremely rare publication, provided an annotated bibliography of early malacological works, with some biographical data for several of the authors. We have not

indexed most individuals for whom Porro gave no biographical information and instead merely listed and described a publication or two.

Repetto et al. (2011) included short biographical notes among their definitions for names of Mediterranean molluscan genera and species.

Sherborn (1938-1939) listed book notices and reviews in the *Gentleman's Magazine*, the presumption being that these would have appeared soon after the books and thus narrowing some publication dates.

C. Smyth & R. Smyth (1998), in a book on shell artwork, included biographical information on several collectors and shell artists, and those who wrote about shell art.

Solem (1975) published a survey of the Recent mollusc collection resources in North America, and Sturm (2006) included a brief list as well.

St. Jean (1972) provided cursory biographical vignettes of a number of early authors of new species of molluscs.

Sturany (1901) provided a comprehensive overview of molluscan researchers in the Austro-Hungarian Empire, which then included Hungary, the Czech Republic, and Slovakia, along with part of Poland, Italy, Croatia, and Slovenia.

Swainson (1840), in a charming book on "Taxidermy," included an extensive biographical dictionary of zoologists. Although not always accurate (such as confusing several persons with the same last name), Swainson's work is colored by his sometimes jaundiced or cynical views of several of his colleagues and predecessors. Swainson also provided an extensive autobiographical description. Several of the entries in this book were written by James Duncan, as Swainson himself graciously acknowledged (Swainson: 1840: 108), and we have cited these as "Duncan, in Swainson, 1840: ___." It should be noted that Swainson listed under "malacology" those who actually worked on worms or even holothurians. Swainson, as part of his book-length quinary analyses of evolutionary relationships (Swainson, 1834), included almost 100 pages of biographical essays on various naturalists.

Williams (2009) has written a literary, artistic, and culinary history of snails, with anecdotes about numerous malacologists and collectors.

Wilson (1994) in his history of those who collected gems and minerals, included about 20 who also collected shells.

Ronald Winckworth (1884-1950), spent his professional career as Librarian and Editor at the Royal Society of London. As part of his wide-ranging interests in malacology, he compiled a large card file that listed biographical references about numerous malacologists and collectors now housed in The Natural History Museum (London). The authors of this catalog previously made some use of the Winckworth card files during visits to London. In 2010, Kathie Way arranged to have scans made of the entire card file, which we then reviewed in detail to obtain citations for hitherto overlooked publications.

Wyse Jackson & Spencer Jones (2002) edited a history of bryozoology, of which several articles covered those who also studied molluscs.

Tom Meijer, as part of his research into European Quaternary molluscs, has similarly compiled a number of biographical references, with an emphasis on Dutch and German

workers, and including some references not indexed in the Zoological Record. This information is online at: <http://members.upc.nl/t.meijer64/paginas/ae-arch-bpers.htm> (website inactive as of January 2021; expected to be restored, perhaps with a new link, sometime in the future). Similarly, Kevin Cummings has assembled some biographies of malacologists with portraits at: <https://cummings.inhs.illinois.edu/famous-malacologists/> Tom Rice started the "Shellers from the Past and Present" website with numerous entries on collectors and researchers; Frank Maartense recently took over this website: <https://www.conchology.be/?t=9000>

An interesting compilation of people who are memorialized in the names of marine organisms was prepared by the late Hans Hansson. This web publication is the source of several of our "orphan" entries for persons as yet lacking published biographical information. It is available (but no longer updated) at: <https://www.bemon.loven.gu.se>

Some of the biographies and bibliographies published in the *Journal of Conchology* over the past century are now online, in a re-typeset format, at:

<http://www.conchsoc.org/node/557> [Eminent Conchologists]

http://www.conchsoc.org/collectors_east_africa/collectors.php

In addition to the foregoing general sources, we have also relied on library catalogues for further information on various persons and their publications. In particular, we relied on the print catalogues of the British Museum (Natural History) and the Royal Society of London *Catalog of Scientific Literature*. The most useful online catalogs were those of the Library of Congress, Smithsonian Institution, Harvard University, the University of California library system [Melvyl], The Natural History Museum (London), and WorldCat.

There are yet other general sources that have provided useful leads in our research, but which we have only occasionally cited in this work. These include: (1) Barr (1973), who indexed biographical articles in a number of generalist scientific journals, including the *American Journal of Science*, *Nature*, and *Science*, from their origins to about 1920; (2) Griffin et al. (1936-1962), an extensive compilation of papers on the dates of publication of natural history books; (3) Meisel (1924-1929), a bibliography on American natural history; (4) Radwin & Coan (1976), a preliminary compilation of collations of malacological publications, and is a precursor to the Annexes of the present catalog; (5) Sherborn (1940), which has concise entries on the disposition of numerous natural history collections from 1880 to 1939; (6) Wenz (1944), in the bibliography to his *Handbuch der Paläozoologie*, provided compilations for numerous multi-volume paleontological works; and (7) the Royal Society of London (1999) published a valuable index of the obituaries and biographical memoirs published in its journals.

(2) Geographical / Country Publications

Australia: Beechey (2010) discussed those who studied the molluscan fauna of Sydney and elsewhere in New South Wales. Black (1998), as part of the *Fauna of Australia*, prepared a short illustrated history of Australian malacologists. This history was evidently excerpted from a longer work that was announced some years ago and remains in preparation. Hedley (1910) discussed the expeditions and naturalists who explored the marine fauna of Queensland. Iredale & Hull (1927a, b), as part of their monograph on Australian chitons,

provided short biographies of the various persons who either described taxa in the Polyplacophora, or had species named after them, along with their portraits.

Austria: Aescht (2003) gave an account of the collections at the Biology Centre of the Landesmuseum, Linz. Backhuys (2008) discussed several 19th century Austrian malacologists and their correspondence with the editors of the *Journal de Conchyliologie*.

Belgium: Duchamps (1982), in a history of the development of malacology in Belgium, provided concise biographies of various Belgian malacologists and paleontologists from the 19th century and the first half of the 20th century. Subsequently, Duchamps (1999), in a biography of Philippe Dautzenberg, included vignettes of the numerous Belgian and French malacologists and shell collectors who corresponded with and met Dautzenberg.

Brazil: Oliveira & Almeida (2000), in a textbook on malacology, included a historical chapter that featured Brazilian malacologists not treated elsewhere. These are included here but not their treatments of European workers. Simone (2003) provided a brief treatment of Brazilian malacologists, but without life dates or full names. Colley et al. (2012) prepared a short general history of malacology, including mention several Brazilian malacologists not mentioned elsewhere. Sá (2014) discussed a number of nineteenth-century collectors of the Brazilian fauna, including several known for their malacological collections.

Canada (see also under U.S.A.): La Rocque (1962) provided biographical vignettes of several Canadian malacologists. Drake (1963) discussed the numerous collectors and researchers interested in the non-marine molluscs of British Columbia.

Central America and Mexico: Martens (1901) contains short biographical sketches of collectors in that broad area. Zamudio-Varela (2012) discussed some Mexican paleontologists.

Chile: Porter (1926) discussed several 19th and early 20th century foreign and Chilean malacologists who studied the molluscs of Chile. Osorio et al. (2009) discussed the history of the Sociedad Malacológica de Chile and the persons involved. Valentich-Scott et al. (2020) discussed the history of malacology in Peru and Chile.

China: Yen (1941) discussed the numerous malacologists, mostly foreigners, who studied the molluscs of China. Lutaenko & Adrianov (2011) discussed a number of Chinese and Russian zoologists who studied the marine molluscs of China. Zhang et al. (2014) discussed the history of malacology in China from the early years of western zoologists through the present.

Cuba: Aguayo (1950), Álvarez Conde (1958) and Hernández (1972), as part of their histories of zoology in Cuba, included a number of malacologists, both Cuban and from several other countries. Jacobson (1972) also discussed those who collected and studied Cuban molluscs. Breure & González Guillén (2010) published an extensive bibliography of papers on Cuban terrestrial malacology, including biographical papers, and provided photographs and life dates for many malacologists who studied that fauna. Maceira et al. (2011) also published a bibliography of Cuban terrestrial malacology, but with less information on the contributors. Arrechea & Sierra (2013) provided biographies of a number of paleontologists and others who studied the fossils of Cuba. McGinty (2015a, b) discussed his family's travels in Cuba in 1930 and the Cuban malacologists they met. González Guillén (2019: 21-44) discussed the numerous malacologists and collectors of Cuban land

snails, specifically the genus *Viana* (Helicinidae), and the history of the national and regional malacological collections.

Denmark: Gosch (1870-1878), in his history of Danish zoology, included numerous Danish malacologists and shell collectors. Garboe (1959, 1961) published a detailed history of geological sciences in Denmark, from medieval times to the 1950s, including a number of paleontologists who collected or studied molluscs. Hylleberg (2009a, b) discussed the history of the collections at the Zoological Museum of the University of Copenhagen, with an emphasis on the bivalve family Cardiidae, with details about collectors, donors, and curators, mostly Danes but with a number of others, including portraits. Spärck (1945), in a history of the Zoologisk Museum, discussed numerous malacologists and others who collected molluscs for that institution. He later (Spärck, 1953) briefly summarized the growth of zoology in Denmark, originating with the Museum Wormianum in 1655, and concluding with a synopsis of the numerous research institutions in this area. Spärck (1962), upon the 300th anniversary of the study of zoology at the University of Copenhagen, discussed a number of Danish conchologists and malacologists affiliated with that institution. Wolff (1979) in a history of zoology at the University of Copenhagen, included numerous persons who studied or collected molluscs. Wolff (1993), in a review of Danish crustacean workers, included a number of individuals also known for research on molluscs. See also Scandinavia.

Finland: see Scandinavia.

France: Amigo (2017) provided biographies of numerous zoologists and paleontologists who studied the molluscs of Roussillon, in southern France; as this region includes the marine lab at Banyuls-sur-mer (Perpignan), a number of zoologists from elsewhere in France are covered. Audibert (2009) discussed numerous malacologists associated with the Société Linnéenne de Lyon. Audibert & Clary (2007) analyzed those who contributed to the collections at the Muséum de Lyon. Audibert (2010) provided information on the research and collections of malacologists who worked in the Bourgogne region, including those whose collections are now in the Université de Bourgogne. Bauchot et al. (1990), in a history of 19th century ichthyology in France, included a number of zoologists who also made contributions to malacology, notably Cuvier and Valenciennes. Cailliez (1984) discussed a number of European shell collectors from the 18th and 19th centuries, with an emphasis on those from France. Cailliez & Finet (1997), in a biography of Benjamin Delessert, included short descriptions of numerous French and Swiss malacologists and shell collectors who interacted with Delessert. Carré (1991) explored the history of non-marine malacology in France. Dietz & Nutz (2005) and Dietz (2006) discussed collections and the collecting and trading of shells in the 1700s. Duchamps (1999), in a biography of Philippe Dautzenberg, included vignettes of the numerous Belgian and French malacologists and shell collectors, including those from the French overseas colonies, who corresponded with and met Dautzenberg. Duris (1996) discussed the role of the Écoles Centrales in the development of the study of natural history. Fischer-Piette (1945) provided a detailed history of his predecessors who served as curators of malacology at the Muséum National d'Histoire Naturelle. Germain (1930) discussed the development of French non-marine malacology. Huard & Wong (1965), in a history of French expeditions, provided biographies of a number of naturalists and physicians who collected and described the molluscs obtained during these voyages. Lamy (1931) discussed the natural history cabinets in France during the 1700s,

including many containing shells. Merle et al. (2008: 113-135) enumerated the principal type collections for the major paleontological researchers in France. Métivier (1982) discussed the history of the malacological collections and researchers at the Muséum National d'Histoire Naturelle, Paris. Servais et al. (2012) discussed the history of paleontology in France and the primary research institutions. Sherborn & Woodward (1901a, b) provided collations of the major French natural history and oceanographic expeditions. Wood & Gallichan (2008) mentioned several collectors who supplied material to C. M. F. Ancey.

French Polynesia: Bouchet (2020) discussed the 250 years of malacological exploration in French Polynesia.

Germany: Bieler & Petit (2012) discussed the Museum Godeffroy, including its collectors and its publications, including taxa made available therein. Fechter (1992), in her history of the malacological collection at the Zoologischen Staatssammlung München, discussed a number of persons who conducted research in this collection, or who donated their collections. Goldschmidt (1956), in a charming history of German zoology, provided biographical vignettes of a number of embryologists and morphologists, including those who worked on molluscs. In his posthumous autobiography, Goldschmidt (1960) supplemented several of these vignettes. Götting (2006) discussed the numerous malacologists who lived in Giessen, including those at the Universität Giessen. Mayer (1974, 1976) provided concise biographical entries for numerous paleontologists from Baden-Württemberg, largely as a supplement to Lambrecht et al. (1938). Reif (1986) discussed numerous German paleontologists who studied molluscs, primarily ammonoid cephalopods. Sakurai (2009, 2013) discussed the history of malacology at the Senckenbergischen Naturforschenden Gesellschaft in Frankfurt in the 19th century, with an emphasis on W. Kobelt and D. F. Heynemann. Zeissler (1984) discussed a number of malacologists who researched the fauna of the area around Mühlhausen in Thüringia. Zilch (1967), in his history of malacology at the Senckenberg Museum in Frankfurt, provided biographical vignettes and portraits of a wide range of German malacologists and paleontologists, including many who worked at other institutions. Janssen (1992) supplemented Zilch's history on the occasion of the 175th anniversary of the museum. Wiese (2004) discussed the Haus der Natur – Cismar, a small German museum and the malacologists and collections associated with it.

Jungbluth and his colleagues have authored a series of papers on the study of non-marine malacology in Germany, arranged by province. These include biographies of the persons whose activities contributed to the study of this fauna. To date, thirteen titles in the *Malakozoologische Landesbibliographien* series have been published, with all the German provinces except Bavaria (Bayern) covered to date: Bössneck & Knorre (1997) (Thüringia); Haldemann (1998) (Brandenburg); Jungbluth & Bürk (1984) (Baden-Württemberg); Jungbluth & Bürk (1985) (Hessen); Jungbluth & Wiese (1989) (Schleswig-Holstein); Jungbluth et al. (1990) (Nordrhein-Westfalen); Jungbluth et al. (1991a) (Niedersachsen and Bremen); Jungbluth et al. (1991b) (Berlin); Jungbluth et al. (1993) (Rheinland-Pfalz); Jungbluth et al. (1995) (Saarland); Körnig et al. (2007) (Sachsen-Anhalt); Schniebs (1999) (Sachsen); and Seeman (1995) (Mecklenburg-Vorpommern). Bürk & Jungbluth (1985: 294-306) and Jungbluth (2006: 31-32) indexed the biographical articles published in the German malacological serials through 2005.

Hungary: Kiss (1980-1987) provided a series of biographical vignettes on malacologists, primarily those who worked on the Hungarian fauna, but also including a scattering of persons from elsewhere in Europe and even from the U.S.A. These vignettes are entirely in Hungarian, limiting their accessibility.

India: Gravely (1922) and Prashad (1932) discussed early collectors and researchers on the fauna of India and Ceylon. Preece et al. (2022) discussed the numerous collectors in British India who provided specimens to William Benson (1803-1870) and those who described new species based on Benson's collections.

Ireland (see under United Kingdom).

Israel: Mienis (2012) discussed a number of individuals whose collections from the Middle East are now in the Hebrew University Mollusc Collection, or who conducted research on that collection.

Italy: Capellini (1902) provided short biographies of a number of paleontologists, with emphasis on those who collected or studied the fossils of Italy. Gaudant (2005) discussed the unpublished manuscript of Séguier, which discussed numerous Italian and other paleontologists of the Renaissance. Ghisotti (1970) provided a cursory history of Italian malacology and conchology. Manganelli et al. (2017), in a history of the Società Malacologica Italiana (1874-1906) provided biographical citations for its members and for other Italian malacologists of that time period. Morello (1988) discussed a number of paleontologists from the 16th through 19th century, with an emphasis on those who wrote about Italian fossils. Priolo (1950) discussed those who studied and collected the molluscs of Sicily. Sarti (2012) discussed the numerous paleontologists, many of whom studied molluscs, at the Capellini Museum in Bologna.

Japan: Callomon & Tada (2006) discussed Yoichiro Hirase and his contemporaries. Kuroda (2003), in a translation edited by Callomon, listed many early collectors of land snails in Japan. Lutaenko & Noseworthy (2012) discussed the numerous malacologists who published on the marine bivalves of the Sea of Japan.

Korea: Lutaenko & Noseworthy (2012) discussed the numerous malacologists who published on the marine bivalves of the East Sea. Yoo (1976: 154-166) discussed the early publications on the molluscan fauna of the Korean peninsula.

Latin America: Chardon (1947, 1949) discussed a number of Latin American malacologists, with an emphasis on those who worked in Cuba, the Dominican Republic, and Puerto Rico. Crosse (1891a, b) reviewed the history of malacology in Hispaniola. Martens (1901) contains short biographical sketches of collection in that area.

Mauritius: Griffiths & Florens (2006: 38-42) provided capsule biographies of numerous individuals who collected or described molluscs from Mauritius and adjacent islands in the Indian Ocean.

Malaysia: Steenis-Kruseman (1950), spouse of the well-known botanist, provided an encyclopedic biographical dictionary of those who collected and described the flora of Malaysia. A number of these individuals were also or primarily interested in molluscs.

Mexico: Díaz de León (1910) reviewed the early history of molluscan collections in Mexico. Beltrán (1986), Olivera & Polaco (1991), and Naranjo-García (2003) discussed the development of malacology in Mexico, with a focus on institutions and publications and

fewer details about specific individuals. Naranjo-García & Smith (2014) discussed numerous individuals who collected and described terrestrial molluscs from Mexico. Martens (1901) contains short biographical sketches of collection in that area.

Middle East: Bosch et al. (1995), in their book in the marine molluscs of eastern Arabia, discussed the key collectors and researchers for that fauna.

The Netherlands: Benthem Jutting (1939) provided extensive notes on various 18th century shell collectors as part of her history of the mollusc collections in Amsterdam. Benthem Jutting (1950) also discussed a number of shell collectors and expeditions whose collections are now in the Zoological Museum, Amsterdam, and later she prepared a history of the study of Dutch molluscs (Benthem Jutting, 1959). Bruggen (1977) summarized the history of malacology in The Netherlands and its colonies, with additional contributed chapters devoted to experimental malacology and the Dutch malacological society. Engel (1986) provided a comprehensive catalogue of Dutch zoological collectors, with an emphasis on the pre-1800 natural history “cabinets;” we have only indexed those who had malacological interests. Coomans (1992) discussed a number of Dutch collectors prior to 1735. Fransen et al. (1997) prepared a type catalogue of decapods in the Nationaal Natuurhistorisch Museum, which includes a biographical list of pre-1900 collection sources (pp. 205-311); those include a number of persons who obtained molluscs in addition to crustaceans, and many have portraits. Holthuis (1995) published a detailed history of the Rijksmuseum van Natuurlijke Historie, Leiden (now called the Naturalis Biodiversity Center), with biographies of its staff and collectors. Voous (1995), in his biographical dictionary of 20th century Dutch ornithologists, included 21 ornithologists who also had interests in molluscs, as identified by Moolenbeek (1996). Cadée et al. (2009), in a history of the Nederlandse Malacologische Vereniging, included chapters on the history of various other Dutch institutions, and biographical or autobiographical essays on Dutch malacologists. Bijl et al. (2010) prepared a biography of Schepman, with information about several other contemporary malacologists. van Leeuwen & van Gemert (2020) discussed the Dutch malacologists who were honored by the Nederlandse Malacologische Vereniging.

New Caledonia: Bouchet et al. (2008, 2009) discussed the numerous French deep-sea expeditions from the 1990s to 2008 in New Caledonia and elsewhere in the south and western Pacific Ocean, including photographs of the systematists and their new species.

New Zealand: Andrews (1986) discussed the early English and German authors who described new molluscan species collected in New Zealand by the Cook expeditions. Brook et al. (2020), in their catalogue of the non-marine Mollusca described by F. W. Hutton, included biographical information on a number of individuals who collected those molluscs for Hutton. Fleming (1966) mentioned several workers involved in the study of New Zealand Cenozoic paleontology. Hamilton (1906) discussed the history of the mollusc collections at the Colonial Museum (now the National Museum of New Zealand), and included a listing of individuals who had New Zealand species named after them, with short biographical notes.

Norway: see Scandinavia.

Peru: Aguilar (2009) discussed the malacologists associated with the Universidad Nacional Mayor de San Marcos, and Lamas (1981a, b) provided biographies of a number of entomologists who collected or studied the insects of Peru, some of whom also collected or

studied molluscs. Valentich-Scott et al. (2020) discussed the history of malacology in Peru and Chile.

Philippine Islands: Hidalgo (1904: 8) listed some of the collectors who provided material for his study of that fauna.

Poland: Pokryszko & Riedel (1999) surveyed nearly 150 years of Polish malacology, and provided biographical information on nearly 20 now-deceased malacologists, many not documented elsewhere in the malacological literature. They also listed a number of living malacologists, but without biographical data other than their institutional affiliations, and we have not indexed those persons.

Portugal: Burnay & Monteiro (1988) provided a useful history of malacology in Portugal, including several who worked on the fauna of Portugal's overseas colonies. Hidalgo (1884) discussed the early authors who wrote about the molluscan fauna of Spain and Portugal.

Russia/Ukraine/U.S.S.R.: Amitrov (1983) and Egorov (2004) prepared listings of malacologists, mostly living in the U.S.S.R., Russia, Ukraine and other former Soviet states. We cite the first edition of Egorov (1998) for one person only, Petr Gerasimov, who passed away before the second edition. Gokhnadel (2014) published a two-volume work on German-Russia scientists that included a few malacologists. Nevenskaya et al. (2009) provided a history of molluscan studies in the Russian Paleontological Institute. Pisaryev (2022) discussed the researchers who studied the freshwater molluscs of the Donets River Basin. Scarlato (1960) included profiles of some workers on the marine fauna of the Far East and summarized the recent work of Soviet malacologists (1981-1982). Slugina (2012) discussed biologists who studied Lake Baikal, including several malacologists. Vinarski (2010) provided a detailed history of the malacologists and collectors who studied and collected the freshwater molluscs of Siberia.

Scandinavia – Sweden, Norway, Denmark & Finland: Westerlund (1897) discussed those who made a contribution to the non-marine malacology of these countries.

Singapore: Tan et al. (2019) discussed several researchers, mostly French, who collected and studied molluscs from Singapore.

South Africa: Barnard (1965) provided an alphabetical index of those whose names were used as eponyms in South African malacology, that is, as the source for new species and generic names. Given South Africa's colonial history, many of these individuals were actually Dutch, English or even German (the latter associated with German Southwest Africa, today's Namibia). We have not indexed those who were government or military officials, absent any other connection with malacology than being honored with a species name. Kilburn & Rippey (1982) mentioned collectors in southern Africa, and Fouché (1995) provided new information on South African shell collectors and malacologists of the ensuing years.

Southeast Asia: Lutaenko (2016) summarized earlier work on bivalves in the several countries surrounding the western part of the South China Sea: Singapore, Malaysia, Thailand, Cambodia, Vietnam and China.

Spain: Altaba & Travesset (1985) provided biographical information on those malacologists who lived in the Catalan region of Spain, and those from elsewhere who worked on its fauna. This work is written in Catalan, and the spellings of personal names are sometimes different

from those in Spanish sources. Hidalgo (1882) included a section in his Introduction covering a number of Spanish workers and collectors not covered elsewhere, and Hidalgo (1884) discussed the early authors who wrote about the molluscan fauna of both Spain and Portugal. Muñiz Solís (2002), as part of an etymological “dictionary” of malacology, provided short biographical summaries on numerous malacologists, with an emphasis on those from Spain. Although most of these entries appear to be condensed from other sources, such as Dance, this is a useful work for certain Spanish malacologists not treated elsewhere.

Sweden: Löwegren (1952) discussed numerous Swedish naturalists who lived prior to 1800, including Linnaeus and his students. See also under Scandinavia (*supra*).

Switzerland: Cailliez (1995) discussed the malacological collections in the Muséum d’Histoire Naturelle de Genève, and Cailliez & Finet (1997), in their biography of Benjamin Delessert, included short descriptions of numerous French and Swiss malacologists and shell collectors who corresponded with and met Delessert. Fischer (1973), in his biography of the pioneering Swiss paleontologist Johann Jakob Scheuchzer, included biographical remarks on many of Scheuchzer’s contemporaries and successors, from Switzerland and elsewhere in Europe. Neubert et al. (2023), in their biography and catalog of Albert Mousson, included biographies of numerous collectors who provided molluscs to Mousson. Turner (1998) contributed a chapter on the history of Swiss malacology to a biogeographical atlas of Swiss molluscs.

Turkey: Sarigül (2021a, 2021b) discussed the numerous paleontologists who studied the fossils of Turkey.

United Kingdom [in headers as U.K.] **& Ireland:** Abbott (1963) discussed some museums in the U.K. Cleveley (1995) discussed several British conchologists who were part of the transition from shell-collecting to descriptive conchology in the 19th century, and placed these workers in their broader social and scientific contexts. Dance (1976) discussed shell auctions in the U.K. Desmond (1985), in his history of the unexpectedly contentious early years of the Zoological Society of London, included information on a number of conchologists who had influential roles in its growth. R. Dodsley & J. Dodsley (1671) gave an early account of the mollusc collections in the British Museum. Fortey (2008), in an anecdotal history of the Natural History Museum (London), formerly the British Museum (Natural History), discussed the research of several malacologists who worked at that institution. Goodwin (2020, 2021b) discussed members of the Conchological Society of Great Britain and Ireland involved in wars and other conflicts up to the 1920s. Heginbothom (1946) discussed the shell collectors who worked on, or collected, the fauna of the province of Wiltshire. Jackson (1945) used his paper on Martin Lister to discuss a number of paleontologists and shell collectors who worked on the fauna of Yorkshire. Laverack (1983) surveyed the teaching of zoology at the Scottish universities and marine stations. Melvill (1890) surveyed a number of early British workers in this field. Moore (2007) discussed the numerous malacologists associated with marine biological studies in the Clyde Sea area east of Scotland. Norris reviewed Yorkshire malacology (1985) and then (1993, 1995a, 1995b, 2000) provided capsule summaries of the major collections now located at the Leeds Museum and their collectors. Praeger (1949) provided short biographies of numerous naturalists who lived in Ireland, or collected its fauna.

Lovell Reeve and Edward Walford edited a six-volume series, *Portraits of men of eminence in literature, science, and art, with biographical memoirs* (1863-1867), which

included a number of individuals with an interest in molluscs, with the most noteworthy essay being that on Hugh Cuming by Reeve, who knew Cuming personally. To the extent we have been able to discover the authorship of the individual essays, these are identified; otherwise, we have attributed them to “Anonymous”: volumes 1 and 2 were edited by Reeve, and Walford edited the remaining four volumes after Reeve’s death. Each essay is accompanied by an albumen photograph of the subject, representing one of the earliest uses of portrait photography in a publication.

Salisbury (1945), in a presidential address to the Conchological Society of the United Kingdom, provided a detailed history of key persons in British conchology and malacology. Sherborn (1935) listed the collectors of specimens mentioned in the *Mineral Conchology* of James and James De Carl Sowerby; only a few of his entries have been included here, most of the rest being fairly obscure. Sigwart & Leonard (2009) discussed the collectors and researchers associated with the mollusc collections of the National Museum of Ireland. E. A. Smith (1906) provided a chronological and alphabetical catalog of major shell collections that were received by the British Museum and the British Museum (Natural History) (now The Natural History Museum), from 1759 to 1904. Sykes (1946) discussed earlier collectors of Dorset. J. W. Taylor (1894-1921), in his four-volume treatise on the non-marine molluscs of Great Britain and Ireland, included 80 portraits of malacologists and conchologists whom he “associated” with each of the species; in many cases, these are the first published images of the person; in some cases, these appear to be the only published photographs of their subjects. Tobin’s (2009) discussion of the Duchess of Portland as a collector covers her relationship to other conchologists of her time. Tomlin (1941-1949) provided a comprehensive review of shell sales, including information on some of the sellers and purchasers; Lingwood (1979) provided an index to the collections enumerated by Tomlin.

Trew’s biographies of Melvill (Trew, 1987), Tomlin (Trew, 1990), and E. A. Smith (Trew, 1993) included a number of biographical vignettes and citations to sometimes obscure obituaries for those who provided shells to these persons, or otherwise corresponded with them. However, some of these persons had no other connection with malacology. It should be noted that her biography of H. Adams & A. Adams, Trew (1992) did not include comparable biographical vignettes. Similarly, Warén’s (1979) biography of Jeffreys provided information on several individuals who corresponded with Jeffreys, as well as extensive station lists for the oceanographic expeditions that Jeffreys participated in, or from which he described shells. Wilkins’ histories of the Sloane (1953), Banks (1955), and Cracherode (1957) collections cover not only their subjects, but also many of their associates. In a paper about the Mason collection, Winckworth (1940) discussed several earlier collections that were incorporated into it. Woodward’s (1861) early account of shell collectors in London mentions a number of persons of interest.

United States of America [in headers as U.S.A.]: Tryon (1862) and Dall (1888) prepared biographies of several early American malacologists and shell collectors, including some individuals who do not appear to have been discussed in other sources.

Abbott (1973, 1974, 1975, 1987) prepared several editions of an extensive “Who’s Who” of American and Canadian malacologists, past and present, with a scattering of Latin Americans included as well. We have indexed nearly all of his entries, except for those for which no substantive information was provided (other than that the person was a member of the American Malacological Union or the Conchologists of America). Abbott’s works are

somewhat over-inclusive, since persons with only a passing interest in molluscs were included, but they still provide probably the most detailed source of biographical information for these two countries. Because over 30 years have elapsed since the last edition, many individuals listed as living by Abbott are no longer, and we would appreciate receiving updated information for future editions of the present list.

Oral histories of five now-deceased American malacologists are included in this work: Shasky (1980) and Shasky & Brookshire (1982) on Stillman Berry; Murray (1999) on William Clench; Coan (1983) on Myra Keen; Henson (1982) on Harald Rehder; and Walzer (1981) on Ruth Turner. These oral histories are noteworthy for their autobiographical information, and the sometimes candid vignettes of the subject's colleagues. We encourage our colleagues to prepare similar oral histories of other malacologists, in order to preserve their reminiscences.

Abbott (1956) provided a historical overview of shell clubs and malacological societies in the U.S., including several little-known clubs founded in the 1800s. Addicott (1981) described several paleontologists who worked on the Cenozoic marine fauna of the Pacific Northwest. Baily (1960) discussed Quakers who made contributions to malacology and (1962, 1988) provided entertaining accounts of early shell collectors in California. Binney (1863-1864), in his bibliographies of North American conchology, provided valuable information on the early publications, many of which are rare today; his entries are not re-indexed herein. J. B. Burch (1981) discussed the mollusc collection at the University of Michigan. Callomon & Robertson (2009) provided a history of malacology at the Academy of Natural Sciences of Philadelphia, with short biographies of the malacological curators. Carriker (2004) reviewed the history of the National Shellfisheries Association and its predecessors, with portraits of its officers. Clampit (1992) reviewed the history of the Conchologists of America on its 20th anniversary. Coan (1988) discussed a number of amateurs who made contributions to malacology in the western United States. Coe (1918), in a sweeping survey of zoology in America, from 1818 to 1918, covered numerous malacologists, most of whom were only mentioned in passing; we have only indexed those for whom a substantive discussion was provided. Cordeiro (2004) discussed freshwater mollusc collectors of Rhode Island. Dees (2022) prepared a list of women memorialized in the names of West Coast species. Dutro (2004), reviewing the history of paleontology and stratigraphy at the United States Geological Survey, included portraits of a number of paleontologists. Elliott (1979) provides a summary of information about numerous American scientists who worked prior to 1900, compiled from other biographical sources.

Ewan (1955) discussed a number of 19th century malacologists and shell collectors in San Francisco and adjacent areas of California. Goetzmann (1959, 1966) discussed the role of scientists, including some malacologists and paleontologists, in the exploration of the western states. Goodrich (1931) provided an eccentric account of several 19th century collectors of non-marine molluscs in the southeastern United States. Haag (2012) devoted a chapter of his book on North American freshwater mussels to a history of the study of mussel ecology. Harris (1937) provided a concise overview of those who worked on the fossils of the Western Hemisphere, with an emphasis on the 1832-1932 time period. Hickman (2008, 2009) discussed the molluscan paleontologists of the University of California, Berkeley. Joffe (2017) provided reminiscences with photographs of numerous shell collectors and several malacologists whom she knew, mostly from the U.S. Johnson (1996) discussed a

number of malacologists who collected and studied the non-marine molluscs of the Hawaiian Islands. Johnson (2004) discussed malacologists associated with the Boston Society of Natural History. Johnson (2006a) discussed the 19th century researchers who published in the *Annals* of the Lyceum of Natural History of New York, and the disposition of the Lyceum's collections. Johnson (2006b) discussed the history of the mollusc collections at Harvard University's Museum of Comparative Zoology, and provided biographies of the curators and of several other individuals associated with the curators. Kay (1970, 1972, 1994) set forth a brief history of those who worked on the fauna of Hawaii during the missionary days, when the Kingdom of Hawaii was a popular destination for missionaries from New England and elsewhere. She later (Kay, 1979: 20-31) included other Hawaiian collectors and institutions.

Leviton & Aldrich (1997), in their publication of a posthumous history of the California Academy of Sciences during its first half-century prepared by Theodore Henry Hittell, discussed various malacologists associated with that institution. Leviton & Aldrich (2018) provided capsule summaries of the paleontologists at the California Academy of Sciences. Lipps (2004) included portraits of several paleontologists in a paper on the history of the University of California's Museum of Paleontology. Martin (1995) provided extensive descriptions of the hardy individuals who studied the molluscan fauna of Maine. Meisel (1924-1929) provided a detailed bibliography of works on natural history in the United States, including malacology, from 1769 to 1865. Merrill (1906), in his detailed history of American geology, provided biographical vignettes of numerous paleontologists, including those who worked on molluscs (this work was slightly revised and published in book form in 1924; we have here only cited the original edition). Moore (1989) prepared an illustrated exhibition catalog for the centennial of the American Society of Zoologists, which included works by a number of malacologists. Moring (2002) discussed several 19th century collectors and expeditions in the exploration of the western part of the United States. Norwood (1997), in a narrowly focused paper on women who worked on molluscs, discussed the overlooked women who did drawings of shells and molluscs in the 19th century, with an emphasis on those who worked for Say, Tryon, and Pilsbry; she also accidentally included one man (Lorraine Frierson), evidently on the basis of his first name. Peck & Stroud (2012), in a lavishly illustrated history of the Academy of Natural Sciences of Drexel University, included biographical information and portraits of many of the malacologists associated with that institution or whose collections are now housed there. Pilsbry (1914) discussed the early researchers and collectors of the Achatinellidae land snails. Pritchard (2001), in an account of the Fairport Biological Station, Iowa, discussed the history of freshwater mussel cultivation in the United States.

Rehder (1997) wrote a history of the Division of Mollusks, National Museum of Natural History (Smithsonian Institution), which discussed numerous persons and expeditions of relevance to the mollusc collection. Remington (1977) provided capsule biographies of nearly all the persons who worked on molluscs at the Peabody Museum of Natural History, Yale University. Rosenberg & Khoo (2018: 228-231) provided life dates for a number of collectors whose specimens are now in the Academy of Natural Sciences of Drexel University. Sanders & Anderson (1999) discussed a number of malacologists and shell collectors from South Carolina. A. G. Smith (1974 ms.) provided detailed biographical comments on a number of malacologists and shell collectors from the west coast of the U.S.A.; although Smith's information was submitted for the 1975 supplement to Abbott's

directory of American malacologists, it appears to have been overlooked. Spencer (1986) discussed a number of 19th century naturalists in California, including those with an interest in malacology. Tryon (1861) issued a bibliography of American authors on Recent malacology. Turner (1952) provided concise descriptions of a number of malacologists from New England, particularly Massachusetts. This research used the “Oral history of tenured women in the Faculty of Arts and Sciences (1981)” section on Ruth D. Turner prepared by Judith B. Walzer and made available through the archive of the Henry A. Murray Research Center of The Radcliffe Institute for Advanced Study, Harvard University, Cambridge, Massachusetts. Ward & Allmon (2019) provided summaries of the numerous paleontologists who collected or studied the fossils of Virginia. Welch (1998), in a wide-ranging survey of American natural history in the mid-19th century, discussed a number of conchologists. Williams et al. (2008), in a book on the freshwater bivalves of Alabama, included a historical chapter that discussed numerous researchers who worked on this fauna; we have listed those who published more than one paper on the subject. Williams (2007), in a comprehensive history of invertebrate zoology at the California Academy of Sciences, discussed nearly all of the malacologists and conchologists associated with that institution. Youmans (1896) edited a volume that reprinted biographical essays of fifty American scientists, originally published in *Popular Science Monthly*; however, the original date and authorship of the individual essays was not provided.

Uruguay: Barattini (1964), Olazarri (1975), Klappenbach (1998) and Zaffaroni (2010) discussed the development of malacology in Uruguay.

Vietnam: Lutaenko (2000a, b) discussed the contributions by Russian malacologists to the study of bivalves from Vietnam. Hylleberg (2014) discussed Vietnamese contributions to the international Tropical Marine Mollusc Programme [TMMP], but without biographical details.

(3) Taxonomic Publications

Achatinellidae: Pilsbry (1914) discussed the early researchers and collectors of the Achatinellidae.

Conidae: Kohn (1992) published a comprehensive analysis of the species described in *Conus*, from 1758 to 1840. This monograph includes extensive biographical information about the authors and data on their collections, so it is of broad value to malacologists working on other taxa described by those authors. This book is primarily an updated and repaginated edition of his 1963-1988 papers, which covered authors from 1758 to 1830, with a new chapter on the species described from 1831 to 1840. Kohn (2014) included biographical information for many of those who described or collected new species of *Conus* from the Caribbean and southeastern United States.

Cypraeidae: Groves & Weil (2003), as part of their catalog of species-names of cowries described by various authors, provided the birth and death dates and nationality of many of these authors, with photographs or portraits when available, and a list of invalid taxa.

Haliotidae: Vileisis (2020) discussed the history of abalone fisheries and culture in California, including those who studied this family.

Heterobranchs: Bertsch (2020) reviewed the history of heterobranch research in the eastern Pacific.

Liguus: Breure et al. (2014) discussed the malacologists who described or illustrated the Florida tree snail *Liguus* from 1684 through the early twentieth century. Close (2000) and Humes (1965) discussed the colorful history of the collecting and describing of the multitudinous color forms of the Florida tree snail, *Liguus fasciatus*.

Nautilus: Davis (1987, 2010) and Nikolaeva (2015) discussed the early students of *Nautilus*.

Partula: Gerlach (2014) discussed the numerous collectors and researchers who studied *Partula* land snails in French Polynesia and adjacent regions.

Unionoida: Stansbery (1980) discussed the early history of unionid collecting and research on the Upper Mississippi River, U.S.A. Valledor & Araujo (2011) discussed early (1491-1768) publications that had illustrations of unionids.

Polyplacophora: Iredale & Hull (1927a, b), as part of their monograph on Australian chitons, provided short biographies of the various persons who either described these chitons, or had species named after them, along with portraits of these persons.

Ammonoids and other Fossil Cephalopods: Nelson (1968), Tozer (1984) and Romano (2014) covered many researchers on ammonites, their explorations and their interactions with other paleontologists. Allmon (2017) discussed the numerous artistic representations of ammonoids over several centuries. Donovan & Riegraf (2016) discussed the paleontologists who studied fossil coleoideans (belemnites). Etter (2015) discussed the paleontologists who studied fossil cephalopods prior to 1850.

Recent Cephalopods (Octopus and Squids): Allcock et al. (2015) discussed the research and life of fourteen female cephalopod researchers (eight deceased and six retired). Muntz (1995) discussed those who studied (or fantasized about) the giant squid and the giant octopus.

CONCLUDING REMARKS

In preparing this catalog, we have come to a better appreciation for those who have taken the time to document the history of this field. It is true that some may not always have provided sufficient information about their subjects, or have published contradictory information. Yet, they have usually presented the fruits of their labors so that subsequent generations have a reliable source of information on molluscan researchers, collections, and publications.

Inevitably, we have uncovered some individuals who had unexpected and intriguing aspects in their malacological careers. We seek the reader's indulgence in sharing these vignettes. For example, consider Vinzenz Gredler (1823-1912), now remembered, if at all, for his publications on Chinese non-marine molluscs. The rather extensive literature on Gredler revealed that he was an Austrian priest who spent his entire professional career, some five decades, at the Franciscan college in Bozen (Bolzano), located in what is now the German-speaking region of northern Italy. From this Catholic college, he sent out the young

missionaries on expeditions to China. These missionaries were evidently instructed not only to attempt to convert the Chinese to Christianity, but also to collect whatever molluscs they could find, which they dutifully sent to Gredler. It would appear that Gredler's army of missionaries were more successful in collecting new species of molluscs than in converting the Chinese. Further, Gredler is probably the only malacologist commemorated in a mural on the wall of a German restaurant!

And then there is the German expatriate, Kurt Joachim Grosch (1912-1992), who spent most of his adult life in Mozambique, where he became renowned for his collections of deep-water marine molluscs, some of which became new species named after him. Grosch confirmed Mark Twain's famous statement that "rumors of my death are greatly exaggerated." In 1958, the editors of the *Hawaiian Shell News* and the *Minutes of the Conchological Club of Southern California* dutifully reported that Grosch had died of drowning. In fact, Grosch was very much alive, and lived for another 34 years. The paleontologist Louie Marincovich also had the pleasure of reading his "obituary" in 2019, while he, too, was very much still alive. Ian Loch of the Australian Museum was acknowledged in a 2021 paper as "the late Ian Loch," but he, too, was still with us.

Last but not least is Amadeus Grabau (1870-1946), a son of German immigrants to the United States, who spent his first 20 years as a distinguished paleontologist and stratigrapher at Columbia University. During World War I, the anti-German hysteria became so heightened that Grabau was harshly criticized for expressing German sympathies, which led to his separation from Columbia University in 1919. In 1920, after the war ended, Grabau emigrated to China where he taught at the National University and also served as chief paleontologist of the Geological Survey of China. When World War II broke out, Grabau found himself trapped in Peiping [Beijing] during the Japanese occupation, and his living conditions became so intolerable that his health irreversibly deteriorated, so that he died soon after the war ended. Today, Grabau is fondly remembered by the Chinese as the father of geology and paleontology in China, with an oversize tombstone located in a special memorial park on the campus of Beijing University.

Myra Keen gave a talk at the Western Society of Malacologists, featuring several malacologists with interesting and unexpected careers outside that field (Keen, 1974). These included George W. Tryon (also a musician who wrote an arrangement of Lohengrin's "Wedding March"), Louis Kossuth (the well-known Hungarian patriot who collected fossil shells in his retirement), Robert V. Anderson (while on a trip in Japan, he uncovered a manuscript documenting the first Europeans to reach Japan, in 1544), and Constantine S. Rafinesque (the first to translate the Delaware Indian language into English).

More generally, we have detected certain patterns in the literature that only became obvious upon conducting this overview. For example, the German and Russian malacological literature is replete with commemorative articles and festschrifts published on the key birthdays of several well-known malacologists, typically on their 60th, 70th, 80th, and even 90th birthdays. The Japanese literature has emulated this, to a lesser degree. More generally, it would seem that only Tera van Benthem Jutting (The Netherlands), Johannes Herold (Germany), Tom Iredale (Australia), J. Wilfrid Jackson (United Kingdom), Hans Kuiper (Netherlands), Isabel Perez Farfante (U.S.A.), Gustav Schacko (Germany), Hildegard Zeissler (Germany), and Adolf Zilch (Germany) attained published recognition upon reaching their 90th birthday; the Japanese recognized Tokubei Kuroda upon his 60th, 77th,

88th, 99th, and 100th birthdays, the last shortly before he passed away. William Cobban made it to 98. Both Archie Jones and Ian McT. Cowan died in early 2010 at age 99; Carl Shuster made it to 100; Mique Pinkerton died at age 102; Henry MacGillavry lived to be 103; Ardito Desio, Humbert Porreca and Victor Scheffer lived to be 104, and Paul-Henri Fischer and Walton B. McDaniel each lived to be 105 or older. The Hungarian malacological literature goes one step beyond, by publishing commemorative articles on the 10th and 20th anniversaries of the deaths of several Hungarian malacologists. Some Germans are also known for having carefully prepared their own autobiographies, which were published as they reached an advanced age, for example, Carl Gegenbaur, David Geyer and Wilhelm Kobelt, perhaps in an attempt to ensure their professional reputation and status.

Abbott (1974: 7) noted that several malacologists died before turning 40, including C. B. Adams (yellow fever, age 39) and William M. Gabb (also 39). To this list can be added Eric Knight Jordan, a graduate student at Stanford and son of the ichthyologist David Starr Jordan. Eric Jordan died at age 23 in a car accident – the driver was a fellow graduate student, Leo George Hertlein, who went on to a distinguished career at the California Academy of Sciences, but never again drove a car. Three other malacologists were killed in auto accidents, two by or in trains, and one by a highwayman.

At least seven persons included in this list are known to have committed suicide. Another six were killed by the “natives” while collecting, mostly in foreign lands. More recent deaths known to be murders include Rae Baxter (killed by his son) and Renate Wittig Skinner (killed by her husband). H. von Bistram was murdered in a church by anarchists. Oddly, Johann Boepple, who founded the pearl button industry in the U.S.A., died after cutting his foot by stepping on a sharp mussel shell, and Charles Garbutt was killed by a *Conus* sting. J. C. McCormick was killed when a trench in an Indian mound, including freshwater molluscs he was collecting collapsed, and paleontologist Carlo Sturani was killed in an accident during an excavation. Conversely, one person on this list, John E. Du Pont, the founder of the Delaware Museum of Natural History, was later convicted of murder and died in prison in 2010. An unfortunate number of marine collectors have drowned in the ocean – John Adams, Robert (Jay) Britt, V. Donati, G. H. Grosvenor, Richard T. Lowe, Marilyn Northrop, M. F. Woodward and T. P. Yeats. Mia Tegner, known for her work on abalone (*Haliotis*) ecology, drowned in a scuba-diving accident near San Diego. Isaac Yaron died while scuba diving in the Red Sea. Peter S. Clarkson was killed by a shark.

World War II probably had the largest number of malacologists serving in active duty in the military. At least two are known to have been killed in battle, both Germans who died on the Eastern Front: Werner Boeckel and Heinrich Wägele, the latter having received multiple medals, including the Iron Cross. Several other German malacologists of that time period were also Nazis in the German Army, presumably without choice, although one, Richard Schlickum, became a high-ranking Nazi judge. Tragically, at least one malacologist is known to have died in a Nazi death camp: Dutch paleontologist Ella Koperberg, killed, along with her family, in Sobibor, in German-occupied Poland. Another malacologist was more successful in escaping the Nazis – Fritz Haas who was fired from his position at the natural history museum in Frankfurt in 1936, going first to Brazil, and then becoming curator of molluscs at the Field Museum in Chicago. Eric Kandel similarly escaped from Austria at the age of 10 in 1939. Jerzy Adamowicz was killed in 1939 while trying to escape from Nazi-occupied Poland to the Soviet Union; Alfred Lityński died in 1945 when he was forced to

leave Poland for the Soviet Union. King Dom Carlos I of Portugal was assassinated in 1908.

Some paleontologists have a very close connection to the outcrops they study, such as Jake Hancock, an expert on European Cretaceous molluscan faunas; his biographer (Kennedy, 2004: 435) noted that Hancock was “born in Salisbury, Wiltshire, on Upper Cretaceous Chalk” and attended high school, “also on the Chalk,” and much of his research was on that specific geological stage.

Eight persons included herein have won the Nobel Prize. Four earned the Nobel Prize in Physiology or Medicine for their research on molluscs: Andrew Huxley and Alan Hodgkin (1963, neurobiology of the common squid, *Loligo*), Bernard Katz (1970, neurobiology of squids and other animals), and Eric Kandel (2000, neurobiology of the sea hare, *Aplysia*). August Krogh received his prize for Physiology or Medicine for his work on the circulatory system (1920), but not for his research on molluscs. Two others, although having an interest in marine molluscs, were much better known for their literary output and earned the Nobel Prize in Literature: John Steinbeck (1962) and Pablo Neruda (1971). Finally, William Lawrence Bragg, the youngest-ever recipient of the Nobel Prize in Physics (1915), also collected shells in his native South Australia, had a cuttlefish named after him, and his shell collection is now in the Manchester Museum.

At least two conchologists are known to have “gone native” in the South Pacific in their youth and were tattooed before returning to their home countries – R. J. L. Guppy in New Zealand, tattooed by the Maori, and J. P. Couthouy in the Marquesas, tattooed by the Polynesians. Another nineteenth-century collector and paleontologist, William Gabb, married a native Indian woman in Costa Rica in 1873, and fathered several children whose descendants were still living in rural Costa Rica in the 1960s. Yet another nineteenth-century collector and marine biologist, Andrew Garrett, similarly married a native woman in Samoa, but it is not known whether they had any children.

The Florida shell collector Thompson Van Hyning named his oldest son after two of his favorite molluscan genera: *Clio* *Cardium* Van Hyning. Tom and Beatrice Burch named their daughter Ruth *Janthina* Burch.

FUTURE PLANS

An online database such as this can easily be updated, and we earnestly seek additional information and corrections. There may be dating, spelling and alphabetization errors, and there are many additional references that could be included. There are a number of relevant malacological newsletters, particularly those published by shell clubs, that we have not been able to review. If someone would like to index one or more of them, that would be an important contribution to this list. Just let us know.

ACKNOWLEDGEMENTS

We thank the numerous individuals who have kindly provided us with copies of their biographical and bibliographical publications in this field, or have informed us of overlooked references, several of whom have also given us access to their research libraries. Equally

important are those individuals whose research queries to us resulted in our unearthing truly obscure publications that ultimately ended up being included here. Finally, we thank the authors of the nearly 280 years of publications – from 1742 to the present – who have documented the history of our field. Taken together, the universe of colleagues and predecessors is simply too numerous for us to attempt to list and thank each one at the risk of omitting others. Hence, we simply extend a global thanks to all involved, and we sincerely hope that future generations will be similarly inspired to continue to document the history of malacology and conchology. We thank the American Malacological Society for hosting this publication on its website. We acknowledge Chandler Olsson of Drexel University and Gary Rosenberg of the Academy of Natural Sciences for their review in early 2020 for purposes of updating the ANSP database, which led to a number of corrections to authors’ names and life dates. Over the past decade or more, we have received a number of helpful additions and comments from several colleagues, particularly Kurt Auffenberg, Bram van der Bijl, Arthur Bogan, Philippe Bouchet, Bram Breure, Marien Faber, Brian Goodwin, Scott Jordan, the late Harry Lee, the late Tom Rice, Gary Rosenberg and Chris Vos.

 Obituary Notices of Fellows of the Royal Society of London, 1932-1950.
 Proceedings of the Royal Society of London, 1854-1932.

GENERAL BIBLIOGRAPHY

The entries in this catalog are in alphabetical order, following the Council of Science Editors (CSE) *Scientific Style and Format* (7th ed., 2006). Full names are given to the extent that we have been able to determine them. Alternative spellings are provided when appropriate, with cross-references elsewhere when necessary. Nobiliary, military, medical, and religious titles are given in brackets, as are (occasionally) nicknames used in publications, married names, or original or maiden names (the latter generally indicated by “né” for men, “née” for women). Familial relationships are specified, when known, in brackets. These are mostly among persons listed, but in a few cases are to famous non-malacologists. Missing names are indicated by underlined blank spaces; asterisks in the life dates reflect either missing data or individuals who are living. Under each entry, the references are in chronological order so that it is easy to identify the most recent information about the dating of works and the most comprehensive treatments in the secondary literature. However, it should be noted that in a few cases, later collations of works may be less accurate than earlier ones, perhaps because earlier articles may have been overlooked.

When an article title is given in brackets, this means either (1) the article did not have a formal title and we have inserted an equivalent title, typically for short obituary notices; or (2) the article was published in a language that does not use the Roman alphabet, such as Japanese or Russian, and the bracketed title is a translation or transliteration of the original. We have discovered that several eastern European accents do not convert properly in creating the online pdf versions of this list, so we have eliminated these when they come to our attention.

For particularly obscure non-malacological journals, we have included full journal subtitles and place of publication, thereby facilitating their identification and retrieval.

Abbreviations and Terms

c. – circa – approximately. Uncertainty about specific dates is indicated by a question mark.

fl. – flourished – meaning that one or both life dates are unknown, but the person was known to be working or publishing at the time indicated.

passim – person mentioned here and there in the work indicated; alternately rendered as “in passim” in other sources.

Freiherr [Gentleman], Graf [Count], Ritter [Knight]– German nobiliary terms.

Anonymous, Collective & Institutional Works

Book of Shells (1836)

J. R. le B. Tomlin, 1943. Book notes. 17. *The book of shells*. Proceedings of the Malacological Society of London 25(3): 142 [1836].

Book of shells, 2nd ed. (1837) online at the Biodiversity Heritage Library.

Catalogue of the Foreign Shells in the Possession of the Manchester Natural History Society (1837)

T. Iredale, 1921. *Buccinulum*, Swainson. Proceedings of the Malacological Society of London 14(5-6): 208.

Committee of General Literature and Education

J. R. le B. Tomlin, 1943. Book notes. 17. *The book of shells*. Proceedings of the Malacological Society of London 25(3): 142 [1836].

Second ed. of *The book of shells* (1837) online at the Biodiversity Heritage Library.

Danish School Lists

J. R. le B. Tomlin, 1944. Book notes. 20. Danish school lists. Proceedings of the Malacological Society of London 26(1): 27-28.

Hand-Book of Conchology (1839)

J. R. le B. Tomlin, 1946. Book notes. 38. *The hand-book of conchology*. Proceedings of the Malacological Society of London 27(2): 73 [author: "a professor of natural history"].

Hortus Sanitatis (1491)

Caprotti, 1991: 16, 61-62, figs. 2-3.

Muscatine Conchological Club [Muscatine, Iowa, U.S.A.]

The Mollusca of Muscatine County and vicinity (1883) at the Biodiversity Heritage Library. Under the Club's name is: F. M. Witter, Pres., introduction stating that all of shells listed are in his cabinet and that he has collected all species listed so no non-local species have crept in! Members of club listed at end of Introduction.

Religious Tract Society

J. R. le B. Tomlin, 1945. Book notes. 24. *Shells and their inmates*. Proceedings of the Malacological Society of London 26(4-5): 90 [1841].

Shells and their inmates (1841) online at the Biodiversity Heritage Library.

Shells and their Inmates (1841)

J. R. le B. Tomlin, 1945. Book notes. 24. *Shells and their inmates*. Proceedings of the Malacological Society of London 26(4-5): 90.

Shells and their Inmates (1841) online at the Biodiversity Heritage Library.

Society for Promoting Christian Knowledge

The book of shells (1836, 1837) and *Tabular view of the orders & families of the Mollusca* (1860) online at the Biodiversity Heritage Library.

Western Academy of Natural Sciences, Cincinnati, Ohio

Catalogue of the unios, Alasmodontas and anodontas of the Ohio River and its north-western tributaries (1849) online at the Biodiversity Heritage Library.

- The following three papers would be of minimal interest to a malacologist who wanted to learn more about Linnaeus. Instead, they are about how Cain's famous 1958 paper completely misunderstood the "logic" of Linnaeus' classification, and how most subsequent authors simply repeated Cain's mistakes without bothering to look at Linnaeus.

 G.-P. Deshayes & K. T. Menke, 1845. Kritik und Antikritik die Deshaye'sche Ausgabe von Lamarck's *Histoire naturelle des animaux sans vertèbres* betreffend. Zeitschrift für Malakozoologie 2(1): 1-14 [a peculiar publication – Menke wrote a critical review of Deshayes ed. of Lamarck in vol. 1 of this journal, so Deshayes submitted a rebuttal in French. Menke, in turn, added his rebuttal to the rebuttal by means of 24 footnotes written in German. So, the paper has the text in French, the footnotes in German!]
